Abstract

The DOCGPT (Doctor General Practitioner Technology) is a innovative healthcare system that aims to revolutionize how people access and manage their health. Accessibility, coordination, and individualized care are frequently challenging aspects of the current state of technology in healthcare. In order to address these problems, DOCGPT incorporates cutting-edge technology into a user-friendly platform, including an AI-powered medical chat bot, virtual consultations, health advice, and prescription monitoring.

The main goal of the project is to develop an all-encompassing healthcare solution that links patients with healthcare professionals, makes informed decisions easier, and encourages proactive health management. The project aims to guarantee the efficiency, security, and usability of the system through a combination of software development life cycle (SDLC) models and user validation processes.

Users' opinions and system performance will be gathered in order to assess the impact of DOCGPT. Initial findings show satisfied users, greater accessibility to healthcare, and improved health knowledge. The DOCGPT aspires to enable people to take control of their well-being by serving as a one-stop shop for all healthcare requirements, building a more connected and responsive healthcare community. The project's conclusion emphasizes how important technological developments are to enhancing healthcare services and fostering general health and wellness.

Acknowledgements

We would like to express our gratitude to everyone who has contributed to the successful completion of this report. Firstly, we would like to thank our teachers for their guidance and support throughout the research and writing process. Their constructive feedback and insightful suggestions have been invaluable in shaping this report.

We would also like to extend our appreciation to our seniors who generously shared their time and provided us with the necessary information to conduct this study. Their willingness to participate and their openness in sharing their experiences and insights were instrumental in the development of this report.

Furthermore, we would like to thank our families and friends for their unwavering support, encouragement, and understanding throughout this challenging process.

Finally, we would like to express our appreciation to all the authors of the relevant literature and resources that have contributed to the development of this report. Their knowledge and expertise have been invaluable in guiding my research and writing.

Once again, we express our sincere appreciation to everyone who has contributed to the completion of this report.

1. Introduction and Description of the Project

The healthcare sector is vital to society because it protects the health and longevity of people everywhere. However, the industry encounters a number of difficulties that prevent it from reaching its full potential in providing effective, accessible, and patient-centered medical services. We suggest the creation of "DOCGPT" (Doctor General Practitioner Technology), a cutting-edge and all-encompassing healthcare system intended to transform the healthcare industry, in response to these urgent concerns.

Despite impressive developments in medical research and technology, major challenges still face healthcare delivery. People find it difficult to get access to high-quality medical care in rural and underserved areas, which results in health inequities and poor health outcomes. Healthcare providers inefficient data exchange and communication lead to fragmented patient care and lost opportunities for early intervention. Additionally, the delivery of seamless and customized care is hampered by erroneous and missing patient data. Additionally, the rising cost of healthcare services puts a strain on healthcare organizations and patients alike, posing a threat to the availability and affordability of medical care.

The delivery of healthcare is made more innovative, compassionate, and effective via DOCGPT. DOCGPT is positioned to alter the healthcare landscape by fusing innovative technologies with compassionate care, enabling a more accessible, connected, and patient-centric healthcare ecosystem. With the help of this transformational project, we hope to create a world where healthcare services enable people, close gaps in medical care, and enhance people's general health and well-being on a worldwide scale. The DOCGPT system, its creation, application, and prospective effects on the healthcare sector are all thoroughly examined in the paper that follows.

The current state of healthcare operations faces critical challenges that hinder efficient service delivery and accessibility to quality medical care. These challenges include limited access to medical services in remote and underserved areas, inefficient communication between healthcare providers, incomplete and inaccurate patient data, and escalating healthcare costs. These factors collectively impact the effectiveness of healthcare operations, resulting in compromised patient care, increased operational costs, and missed opportunities for timely interventions.

Limited access to medical care in remote areas adversely affects the health outcomes of individuals residing in these regions. The lack of healthcare facilities and healthcare providers creates health disparities and denies vulnerable populations access to timely medical attention and specialized treatments. Furthermore, inefficient communication and data sharing between healthcare providers hinder seamless patient care coordination, leading to delays in diagnosis and treatment, and potentially compromising patient safety.

The absence of a centralized and accurate patient data repository hampers the continuity of care and personalized treatment plans. Incomplete and inaccurate patient information can result in medical errors, duplicate testing, and ineffective treatments, leading to suboptimal patient outcomes and increased healthcare costs.

Moreover, the rising costs of healthcare services pose significant financial burdens on patients, healthcare organizations, and government entities. The inability to manage healthcare costs efficiently leads to reduced profitability for healthcare providers and compromises their ability to invest in advanced technologies and improved patient care. For patients, high healthcare costs can deter them from seeking necessary medical attention, resulting in delayed treatment and poorer health outcomes.

1.1. Gap Analysis

2. Methodology

The suitable software development life cycle (SDLC) model for the development of the "DOCGPT" healthcare system is the Incremental SDLC Model.

Iterative Development :

The Incremental SDLC Model allows for the development of the system in small, manageable iterations. Each iteration focuses on specific features and functionalities, allowing the development team to gather feedback and make improvements throughout the development process. This is particularly beneficial for a system like DOCGPT.

Early Delivery of Key Features:

The Incremental SDLC Model facilitates the early delivery of essential features and functionalities.

User Feedback and Validation:

Incremental development allows for regular user feedback and validation. As each iteration is completed, users can interact with the system, test its functionalities, and provide feedback on usability, performance, and effectiveness.

Manageable Risk:

The Incremental SDLC Model helps manage risks by breaking down the development process into smaller, manageable phases.

Considering the complexity and evolving nature of the healthcare industry, the Incremental SDLC Model is a suitable choice for developing DOCGPT. [1]

1. Martin. M, June 10, 2023.' What is Incremental Model in SDLC? Advantages & Disadvantages.'

[Accessed on the 22nd July 2023]

3. Solution outline

3.1. Techniques used to validate the solution idea.

The techniques used to validate the solution idea (problem justification) for the healthcare system "DOCGPT" are as follows:

1. Patients:

Interviews: Conducting interviews with potential patients and users of the healthcare system to understand their healthcare needs, challenges, and preferences.

Questionnaire: The questionnaire helps in collecting structured feedback on the proposed system's features, usability, and potential impact on patient care.

Observation: Observations help in understanding patient behavior and needs in real-world scenarios.

2. Healthcare Providers (doctors, nurses, specialists, pharmacists):

Interviews: Conducting interviews with healthcare professionals to gain insights into their daily challenges, experiences with patient care, and suggestions for improving healthcare delivery.

Workshops: Workshops allow healthcare professionals to share their expertise and collaborate in shaping the proposed solution to align with their requirements.

3. Healthcare Administrators and Managers:

Interviews: Conducting interviews with healthcare administrators and managers to understand the organizational challenges they face in managing healthcare operations and resources.

Document Sampling: Reviewing existing documents, such as reports, policies, and procedures, to gain insights into the current state of healthcare operations and the potential impact of the proposed solution.

4. Government:

Interviews: Conducting interviews with government officials and policymakers to understand their healthcare priorities and how the proposed solution aligns with their objectives.

Document Sampling: Reviewing government documents, policies, and regulations related to healthcare to ensure that the proposed solution complies with existing guidelines and standards.

5. Technology Providers:

Brainstorming: Brainstorming fosters creativity and ideation for the solution's technical aspects.

Prototyping: Developing prototypes of the proposed system to demonstrate its potential functionalities and benefits to technology providers.

6. Non-profit organizations:

Interviews: Conducting interviews with representatives from non-profit organizations to understand their healthcare initiatives, challenges, and potential areas of collaboration.

3.2. [Solution proposed.](#)

The suggested remedy for "DOCGPT" is to create an extensive healthcare website with cutting-edge capabilities that can be enhanced in the future. The website acts as a centralised platform that provides both patients and healthcare professionals with a wide range of features, with the major emphasis on storing electronic medical data and improving patient-doctor interactions.

The proposed solution aims to transform the healthcare landscape by leveraging technology to improve accessibility, coordination, and patient outcomes. With its patient-centric approach and innovative features, DOCGPT has the potential to bridge healthcare gaps, enhance communication between healthcare stakeholders, and empower individuals to make informed decisions about their health. By providing seamless, efficient, and user-friendly healthcare services, DOCGPT seeks to elevate the overall quality of healthcare and positively impact the lives of patients and healthcare providers alike.

4. Innovative features incorporated in the project

Medical Chat Bot:

The Medical Chat Bot is a virtual assistant integrated into the healthcare website that offers instant medical information and assistance to users. It uses natural language processing to engage in interactive conversations with patients, providing responses to their health-related queries, offering guidance on common health issues, and even conducting initial assessments of symptoms.

Reminders and Notifications:

The Reminders and Notifications feature enables the healthcare website to send automated alerts and reminders to users for various purposes. These reminders can include medication schedules, upcoming doctor appointments, health milestones, or important health-related tasks.

Medication Management:

Medication Management is a crucial feature that empowers patients to effectively manage their medications through the healthcare website. Users can input their prescribed medications, dosages, and schedules into the system, and it provides a clear and organized view of their medication routine.

Gamification for Health:

Gamification for Health introduces playful and interactive elements to encourage users to engage in healthy behaviors and achieve health-related goals. Through gamification, users can earn points, badges, or rewards for completing health tasks.

Virtual Reality Therapy:

Virtual Reality Therapy leverages immersive virtual reality technology to provide therapeutic experiences for patients. This feature can be used to treat various medical conditions, such as anxiety, phobias, and pain management.

Social Support Groups:

The Social Support Groups feature connects users with similar health conditions or concerns, fostering a sense of community and emotional support.

Symptom Checker:

The Symptom Checker is an interactive tool that assists users in assessing their symptoms and provides initial guidance on health conditions.

Emergency Assistance:

The Emergency Assistance feature provides immediate access to emergency services and medical assistance in critical situations.

Wallet Accessibility:

Wallet Accessibility allows users to store and manage their insurance cards, and payment information securely within the healthcare website (this includes crypto currencies). This feature enables users to access essential documents and payment details whenever needed, reducing paperwork and administrative burdens.

Geo-fence Tracker (to track doctors if they reached hospitals):

The Geo-fence Tracker feature uses GPS technology to monitor the location of healthcare providers, such as doctors, and notify the system when they arrive at hospitals or specific designated locations.

5. Requirements and Analysis

5.1. Explain the selected requirements elicitation process.

To collect thorough and accurate needs from many stakeholders, the chosen requirements elicitation process for the healthcare system "DOCGPT" combines traditional and modern techniques.

Traditional Techniques:

- Interviews: Interviews provide a personal and detailed understanding of the stakeholders' needs and allow for open discussions.
- Questionnaires: Administering structured questionnaires to stakeholders to collect quantitative data and obtain a broader perspective on their preferences, priorities, and opinions.
- Observation: Observing and analyzing stakeholders' interactions with the existing healthcare processes, systems, and facilities to identify pain points and areas for improvement.

Modern Techniques:

- Brainstorming: Organizing brainstorming sessions with technology providers and non-profit organizations to encourage innovative ideas and creative solutions for the healthcare system.
- Workshops: Engaging healthcare providers and non-profit organizations in workshops to collaboratively identify challenges and requirements, foster teamwork, and build consensus on the proposed solution.
- Prototyping: Developing prototypes of the proposed system to demonstrate potential features and functionalities, gather feedback, and validate the usability and effectiveness of the solution.

5.2. Detailed and specific requirements

- User Registration and Profiles:

Users can create accounts with unique usernames and secure passwords, providing personal and medical information.

- Medical Chat Bot:

An AI-powered chatbot responds accurately to medical queries, utilizing a comprehensive knowledge base.

- Virtual Consultations:

Users can schedule video consultations with preferred healthcare providers, accessing medical records during appointments.

- Access to Health Records:

The system securely manages electronic medical records with role-based access for healthcare providers.

- Medication Management:

Users can manage medications, receive reminders, and access warnings for potential drug interactions.

- Gamification for Health:

Gamified features incentivize users to adopt healthy habits and earn rewards for completing health tasks.

- Virtual Reality Therapy:

Virtual reality sessions designed by professionals offer immersive therapy experiences for specific conditions.

SHARE YOUR MEDICAL RECORDS SECURELY

Your care is better when your medical record is complete and in front of the people who need it.

When they're caring for you, most healthcare providers can already access the health information they need and get automatic updates about treatment you received elsewhere. In cases when they can't, such as if a provider doesn't use an electronic health record that can securely share data, you can share your record with them using Share Everywhere.

Figure 4 - DOC GPT

DOCGPT RESEARCH

WHAT IS DOCGPT?

DOCGPT IS A HEALTHCARE TECHNOLOGY SOLUTION THAT AIMS TO REVOLUTIONIZE THE WAY PEOPLE ACCESS MEDICAL CARE AND MANAGE THEIR HEALTH. IT STANDS FOR "DOCTOR GENERAL PRACTITIONER TECHNOLOGY" AND SERVES AS A COMPREHENSIVE PLATFORM THAT SEAMLESSLY CONNECTS PATIENTS, HEALTHCARE PROVIDERS, AND OTHER STAKEHOLDERS IN THE HEALTHCARE ECOSYSTEM. AT ITS CORE, DOCGPT FEATURES AN ADVANCED MEDICAL CHAT BOT POWERED BY ARTIFICIAL INTELLIGENCE, ENABLING USERS TO OBTAIN INSTANT AUTOMATED MEDICAL INFORMATION AND ASSISTANCE. THE CHAT BOT PROVIDES RELIABLE ANSWERS TO VARIOUS HEALTH-RELATED QUERIES AND OFFERS GUIDANCE ON COMMON SYMPTOMS, PREVENTIVE MEASURES, AND GENERAL HEALTH ADVICE.

DOCGPT ALSO FACILITATES VIRTUAL CONSULTATIONS WITH HEALTHCARE PROFESSIONALS, OFFERING USERS THE CONVENIENCE OF ACCESSING HEALTHCARE SERVICES FROM THE COMFORT OF THEIR HOMES. THROUGH VIDEO OR CHAT-BASED CONSULTATIONS, PATIENTS CAN INTERACT WITH DOCTORS, NURSES, SPECIALISTS, AND PHARMACISTS TO ADDRESS THEIR MEDICAL CONCERNS, SEEK EXPERT ADVICE, AND RECEIVE TREATMENT RECOMMENDATIONS. THE PLATFORM ALSO EMPOWERS USERS WITH PERSONALIZED HEALTH RECOMMENDATIONS, LEVERAGING DATA ANALYTICS AND USER HEALTH PROFILES TO DELIVER TAILORED SUGGESTIONS FOR IMPROVING THEIR OVERALL WELL-BEING. USERS CAN ACCESS A WEALTH OF HEALTH EDUCATION INFORMATION, INCLUDING ARTICLES AND RESOURCES COVERING VARIOUS HEALTH TOPICS, TO ENHANCE THEIR HEALTH LITERACY AND MAKE INFORMED DECISIONS ABOUT THEIR WELL-BEING.

DOCGPT PLACES A STRONG EMPHASIS ON MEDICATION MANAGEMENT, ALLOWING USERS TO INPUT THEIR MEDICATIONS, DOSAGES, AND FREQUENCIES, AND SET UP REMINDERS TO ENSURE TIMELY AND CONSISTENT INTAKE. MOREOVER, IT PROVIDES A WELLNESS PROGRAM DESIGNED TO PROMOTE HEALTHY LIFESTYLE HABITS, INCORPORATING GAMIFICATION FEATURES TO INCENTIVIZE AND TRACK PROGRESS TOWARDS HEALTH GOALS. THE SYSTEM ENABLES USERS TO FIND AND CONNECT WITH NEARBY HEALTHCARE PROVIDERS THROUGH A COMPREHENSIVE HOSPITAL DIRECTORY AND SEARCH FUNCTIONALITY. ADDITIONALLY, IT FACILITATES SOCIAL SUPPORT GROUPS, PROMOTING A SENSE OF COMMUNITY AMONG USERS DEALING WITH SIMILAR HEALTH CONDITIONS OR CHALLENGES.

IN SUMMARY, DOCGPT IS A PIONEERING HEALTH TECHNOLOGY SOLUTION THAT EMPOWERS INDIVIDUALS TO TAKE CHARGE OF THEIR HEALTH, FOSTERING SEAMLESS COMMUNICATION WITH HEALTHCARE PROVIDERS, AND LEVERAGING ADVANCED TECHNOLOGIES TO ENHANCE THE DELIVERY OF MEDICAL CARE AND WELL-BEING.

Figure 22 - DOCGPT

Figure 23 - DOCGPT

7. Evaluation

7.1. Techniques used to analyze the data and results of the analysis

- The **interviews** found that for convenience and effectiveness, people required quick access to medical information, individualized health recommendations, and virtual consultations.
- Responses to the **questionnaire** emphasized the significance of data security and privacy as well as the requirement for intuitive user experience.
- To encourage healthy habits and enhance patient outcomes, gamification aspects and virtual reality therapy were used during **brainstorming** sessions.
- The system's user interface and user experience were refined with the use of **prototypes** and user input, resulting in a smooth experience for all users.

7.2. Lessons learned.

- Collaboration and Communication: Effective communication and collaboration among the development team, stakeholders, and users are vital for successful project outcomes.
- Flexibility for Future Expansion: Designing the system with scalability in mind enables the addition of new features and functionalities in the future.
- Importance of Testing: Rigorous testing at each development stage is crucial to identify security vulnerabilities, and usability issues.
- Balancing Complexity and Simplicity: Striking the right balance between a comprehensive healthcare system and a user-friendly interface is essential. Avoiding unnecessary complexity ensures ease of use for both patients and healthcare providers.

7.3. [Future work](#)

- **Enhanced AI-Powered Chatbot:** The current chatbot functionality could be improved by implementing more advanced natural language processing (NLP) techniques, enabling the chatbot to understand complex medical queries and provide even more accurate responses.
- **Integration of Wearable Devices:** In the future, the system could be expanded to integrate with wearable health devices. This would enable users to track their health metrics in real-time.
- **Blockchain Technology for Data Security:** To further enhance data security and privacy, the system could explore the integration of blockchain technology. Implementing a decentralized and immutable ledger for storing medical records would provide an additional layer of protection against data breaches.
- **Multi-Language Support:** To cater to a diverse user base, the system could include multi-language support for both the user interface and chatbot interactions. Offering the platform in different languages would improve accessibility and user satisfaction.
- **Collaborative Partnerships:** In the future, the system could establish partnerships with pharmaceutical companies, research institutions, and non-profit organizations to further enrich health education resources and support wellness programs.

8. Conclusion

In conclusion, the development of the "DOCGPT" healthcare system has been a significant endeavor aimed at revolutionizing the way patients and healthcare providers interact and manage medical information. Through a user-centric approach and iterative development process, the system has been carefully crafted to meet the diverse needs of patients, healthcare professionals, and other stakeholders.

The incorporation of innovative features, such as the AI-powered medical chatbot, virtual reality therapy, and gamification for health, has enhanced the system's appeal and functionality. Moreover, the seamless integration of virtual consultations, medication management, health records access, and wellness programs has resulted in a comprehensive and user-friendly platform.

In the future, potential enhancements, such as wearable device integration, blockchain-based data security, and multi-language support, will further elevate the system's capabilities and accessibility. By continually seeking opportunities for collaboration and partnerships, the system can expand its resources and support for users.

Overall, the "DOCGPT" healthcare system stands as a testament to the power of technology in advancing healthcare services and empowering individuals to take charge of their well-being. As we embrace the opportunities presented by the ever-advancing field of healthcare technology, we remain committed to delivering the best possible healthcare experience for patients and healthcare providers alike. With this system, we move closer to the vision of a future where all health-related information and services are seamlessly integrated, empowering individuals to live healthier and more fulfilling lives.

10.2. Meeting agenda

Meeting Minutes 1

Date: 2nd June 2023

Venue: IIT Premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Introduction and Project Overview

Brainstorming ideas

Discussion on Requirements and Features

Feedback and Suggestions from Team Members

Assignment of Roles and Responsibilities

Next Steps and Timeline

Meeting Minutes 2

Date: 8th June 2023

Venue: IIT Premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Progress Update on Concept

Review the mind map.

Feedback on Chatbot Functionality and Virtual Consultations

Discussion on Data Security Measures

Team Collaboration and Communication

Planning for User Validation and Testing

Tutorial – Idea Validation

Meeting Minutes 3

Date: 13th June 2023

Venue: Google Meets (Virtual meet-up)

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Recommendations for System Enhancements

Discussion of Wearable Device Integration

Future Work on Gamification and Virtual Reality Therapy

Review of Budget and Resource Allocation

Studying software development life cycles

Meeting Minutes 4:

Date: 22nd June 2023

Venue: IIT premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Updates on User Interface and Data Visualization

Discussion on Telemedicine Expansion

Training Plan for Users and Healthcare Providers

Documentation and User Guides

SDLC methods and how to be implemented.

Tutorial work.

Meeting Minutes 5

Date: 5th July 2023

Venue: IIT Premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Discussion if the team will participate in cutting edge.

Innovative concepts the team could come up with.

Feedback on Social Support Groups and Wellness Programs

Starting the prototype

Discussions on designs.

Recognition and Appreciation for Team Efforts

Meeting Agenda 6

Date: 15th July 2023

Venue: Google Meets (Virtual Meet-up)

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Review of User Feedback and System Usage Data

Identification of Potential System Improvements

Brainstorming on New Features and Innovations

Analysis of Budget and Resource Availability

Planning for System Updates and Upgrades

Assignment of Tasks and Deadlines

Meeting Agenda 7

Date: 20th July 2023

Venue: IIT Premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Progress Update on IFD

Prototype testing

New feature implementation

Future Strategies for User Engagement

Exploring Blockchain Integration for Data Security

Meeting Agenda 8

Date: 22nd July 2023

Venue: Google Meet (Virtual Meet-up)

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

Review the IFD Course work

Final run through the prototype

Discussed about the cutting edge meetings.

Assignment submission

10.3. Meeting minutes

Meeting Minutes 1

Date: 2nd June 2023

Venue: IIT Premises

Attendees:

- Aakash Sathiyathan
- Juzail Zabrin
- Chadithya Dinuwan
- Mohamed Alfar
- Dilina Perera
- Saad Mazhar

Agenda:

1. Introduction and Project Overview:

The meeting was called to order at [Time]. Aakash Sathiyathan, the project lead, provided a brief introduction to the "DOCGPT" healthcare system project. He explained the project's objectives, which aim to revolutionize healthcare services through technology.

2. Brainstorming Ideas:

The team engaged in a brainstorming session to generate innovative ideas for the system's features and functionalities. Various concepts, such as virtual consultations, medication management, and health education resources, were discussed.

3. Discussion on Requirements and Features:

Team members discussed the key requirements for the system, focusing on user needs, data security, and scalability. The importance of user-friendly interfaces and a comprehensive medical record system was emphasized.

4. Feedback and Suggestions from Team Members:

Each team member provided feedback and suggestions on the proposed features. Dilina Perera highlighted the need for multilingual support, while Mohamed Alfar suggested incorporating gamification for health to enhance user engagement.

5. Assignment of Roles and Responsibilities:

Aakash Sathiyathan assigned specific roles and responsibilities to each team member based on their expertise and preferences. Juzail Zabrin was assigned as the lead developer, and Saad Mazhar took charge of user testing and validation.

Action Items:

- Aakash Sathiyathan to finalize the project plan and share it with the team by 30th June 2023.
- Juzail Zabrin to conduct research on virtual consultation platforms and present findings in the next meeting.
- Saad Mazhar to prepare a user feedback questionnaire for future validation sessions.

The meeting adjourned at 3.30pm, and the next meeting was scheduled for 8th June 2023.

Minutes recorded by: Juzail Zabrin

Meeting Minutes 2

Date: 8th June 2023

Venue: IIT Premises

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Progress Update on Concept:

The meeting began with Aakash Sathiyathan providing an update on the progress of the "DOCGPT" healthcare system concept. He presented the mind map that outlined the key features and functionalities of the system.

2. Review the Mind Map:

The team reviewed the mind map and discussed its relevance to the project objectives. Mohamed Alfar suggested adding a feature for health reminders and notifications to ensure patient adherence to treatment plans.

3. Feedback on Chatbot Functionality and Virtual Consultations:

Juzail Zabrin presented the initial design and functionalities of the AI-powered chatbot and virtual consultation platform. The team provided feedback, and Chadithya Dinuwan suggested exploring the integration of language support to accommodate users with diverse language preferences.

4. Discussion on Data Security Measures:

Saad Mazhar initiated a discussion on data security measures to protect sensitive patient information. The team agreed to implement encryption and role-based access control for data privacy.

5. Team Collaboration and Communication:

Dilina Perera emphasized the importance of effective team collaboration and communication. The team agreed to hold regular status update meetings and use project management tools for task tracking.

6. Tutorial – Idea Validation:

Juzail Zabrin conducted a tutorial on idea validation techniques and encouraged the team to validate new features through user surveys and mock user testing.

Action Items:

Aakash Sathiyathan to update the mind map based on the team's feedback and share the revised version.

Mohamed Alfar to research and propose health reminder and notification features for inclusion in the system.

Saad Mazhar to draft a data security plan and present it in the next meeting.

The meeting adjourned at 4.30 pm, and the next meeting was scheduled for 15th June 2023.

Minutes recorded by: Saad Mazhar

Meeting Minutes 3

Date: 13th June 2023

Venue: Google Meets (Virtual meet-up)

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Recommendations for System Enhancements:

The meeting commenced with a discussion of recommendations for enhancing the "DOCGPT" healthcare system. Chadithya Dinuwan suggested including a symptom checker feature to assist users in self-assessment of their health conditions.

2. Discussion of Wearable Device Integration:

Aakash Sathiyathan presented the idea of integrating wearable devices into the system for real-time health monitoring. The team agreed that such integration would provide valuable data for users and healthcare providers.

3. Future Work on Gamification and Virtual Reality Therapy:

Juzail Zabrin discussed the potential of incorporating gamification elements and virtual reality therapy sessions into the system. The team recognized the benefits of using gamification to encourage healthy habits and VR therapy for pain management.

4. Review of Budget and Resource Allocation:

Mohamed Alfar presented a detailed budget plan, which included estimates for development, hardware, and maintenance costs. The team discussed the allocation of resources and agreed on cost-effective strategies.

5. Studying Software Development Life Cycles:

Saad Mazhar initiated a discussion on various software development life cycle models. The team explored the pros and cons of the Waterfall, Incremental, and Agile models to select the most suitable approach for the project.

Action Items:

Aakash Sathiyathan to research and evaluate symptom checker APIs for potential integration into the system.

Juzail Zabrin to explore gamification frameworks and VR therapy platforms for implementation suggestions.

Mohamed Alfar to finalize the budget plan and share it with the team for review.

Meeting Minutes 4

Date: 22nd June 2023

Venue: IIT premises

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Updates on User Interface and Data Visualization:

The meeting started with a presentation by Dilina Perera on the progress of the user interface design and data visualization. The team provided feedback on the layout and suggested improvements for better user experience.

2. Discussion on Telemedicine Expansion:

Aakash Sathiyathan discussed plans to expand the telemedicine feature by collaborating with healthcare providers for virtual consultations. The team deliberated on potential partnerships with local hospitals and clinics.

3. Training Plan for Users and Healthcare Providers:

Mohamed Alfar proposed a comprehensive training plan to onboard users and healthcare providers onto the "DOCGPT" platform. The team agreed on the importance of providing user-friendly guides and tutorials.

4. Documentation and User Guides:

Saad Mazhar presented the documentation structure, which included user guides, technical documentation, and API documentation. The team discussed the need for clear and concise instructions.

5. SDLC Methods and How to Be Implemented:

Juzail Zabrin led a discussion on the different software development life cycle (SDLC) methods and their implementation. The team collectively decided to proceed with the Incremental SDLC Model.

6. Tutorial Work:

Chadithya Dinuwan conducted a tutorial session on specific development tasks and coding best practices. The team appreciated the knowledge-sharing initiative.

Action Items:

Dilina Perera to incorporate the team's feedback and finalize the user interface design.

Aakash Sathiyathan to initiate discussions with potential healthcare providers for telemedicine collaboration.

Mohamed Alfar to prepare user training materials and user guides for the system.

Saad Mazhar to coordinate with the team for documenting the development process.

Juzail Zabrin to oversee the implementation of the Incremental SDLC Model for the project.

Meeting Minutes 5

Date: 5th July 2023

Venue: IIT Premises

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Discussion if the Team Will Participate in Cutting Edge:

The meeting began with Aakash Sathiyathan raising the possibility of the team participating in a cutting-edge technology conference. The team discussed the potential benefits of showcasing the "DOCGPT" healthcare system and agreed to further explore the opportunity.

2. Innovative Concepts the Team Could Come Up With:

Juzail Zabrin encouraged team members to think creatively and propose innovative features for the system. The team brainstormed ideas such as AI-driven health recommendations and personalized wellness programs.

3. Feedback on Social Support Groups and Wellness Programs:

Chadithya Dinuwan presented the proposed designs for the Social Support Groups and Wellness Programs features. The team provided feedback on the user interface and suggested improvements for seamless user engagement.

4. Starting the Prototype:

Mohamed Alfar initiated the development of the system prototype. He shared the progress and demonstrated the initial functionalities, such as user registration and profile creation.

5. Discussions on Designs:

Dilina Perera led a discussion on the overall design aesthetics, ensuring a consistent and visually appealing user interface across all features.

6. Recognition and Appreciation for Team Efforts:

Saad Mazhar expressed gratitude to the team for their dedication and hard work. He acknowledged the team's efforts in overcoming challenges and making significant progress in the project.

Action Items:

Aakash Sathyanathan to gather more information on the cutting-edge technology conference and determine the team's participation feasibility.

Juzail Zabrin to compile the innovative feature ideas and present them in the next meeting for further evaluation.

Chadithya Dinuwan to incorporate the team's feedback and finalize the designs for Social Support Groups and Wellness Programs.

Mohamed Alfar to continue working on the system prototype and coordinate with team members for feature implementations.

Dilina Perera to finalize the design guidelines and ensure consistency throughout the system.

Meeting Minutes 6

Date: 15th July 2023

Venue: Google Meets (Virtual Meet-up)

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Review of User Feedback and System Usage Data:

The meeting commenced with a review of user feedback and system usage data gathered from user validation and testing sessions. The team discussed positive feedback and identified areas for improvement.

2. Identification of Potential System Improvements:

Aakash Sathiyathan presented a list of potential system improvements based on user feedback. The team prioritized the improvements and discussed the feasibility of implementing them.

3. Brainstorming on New Features and Innovations:

Juzail Zabrin initiated a brainstorming session for new features and innovations to enhance the system's capabilities. The team explored ideas such as AI-driven health recommendations and a gamified health rewards system.

4. Analysis of Budget and Resource Availability:

Mohamed Alfar presented an updated analysis of the project budget and resource availability. The team discussed resource allocation and strategies for cost optimization.

5. Planning for System Updates and Upgrades:

Dilina Perera proposed a plan for system updates and upgrades to incorporate the identified improvements and new features. The team agreed on a phased approach to ensure smooth implementation.

6. Assignment of Tasks and Deadlines:

Saad Mazhar facilitated the assignment of tasks to team members based on their expertise and availability. Deadlines were set to ensure timely completion of project milestones.

Action Items:

Aakash Sathiyathan to prioritize and plan the implementation of identified system improvements.

Juzail Zabrin to compile the brainstormed feature ideas and present them in the next meeting for further evaluation.

Chadithya Dinuwan to coordinate with the team for budget optimization strategies.

Mohamed Alfar to update the project plan and resource allocation based on the meeting discussions.

Dilina Perera to finalize the plan for system updates and upgrades and share it with the team.

Meeting Minutes 7

Date: 20th July 2023

Venue: IIT Premises

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Progress Update on IFD:

The meeting commenced with Aakash Sathiyathan providing a progress update on the IFD process. The team discussed the completed features and the next set of functionalities to be deployed.

2. Prototype Testing:

Juzail Zabrin presented the prototype testing results, highlighting the system's performance, security measures, and user feedback. The team reviewed the test outcomes and identified areas for further improvement.

3. New Feature Implementation:

Chadithya Dinuwan initiated discussions on implementing new features identified in the previous meeting. The team brainstormed the technical aspects and impact on user experience.

4. Future Strategies for User Engagement:

Mohamed Alfar shared strategies to enhance user engagement, such as targeted marketing campaigns, social media promotion, and user referral programs. The team considered various approaches to attract and retain users.

5. Exploring Blockchain Integration for Data Security:

Dilina Perera introduced the idea of integrating blockchain technology into the system for enhanced data security and privacy. The team deliberated on the potential benefits and challenges of blockchain implementation.

Action Items:

Aakash Sathiyathan to oversee the IFD process and ensure timely deployment of planned functionalities.

Juzail Zabrin to collaborate with the testing team and address any identified issues.

Chadithya Dinuwan to initiate the development of new features based on the team's prioritization.

Mohamed Alfar to devise a comprehensive user engagement strategy and present it in the next meeting.

Dilina Perera to conduct a feasibility study on blockchain integration and report the findings to the team.

Meeting Minutes 8

Date: 22nd July 2023

Venue: Google Meet (Virtual Meet-up)

Attendees:

Aakash Sathiyathan

Juzail Zabrin

Chadithya Dinuwan

Mohamed Alfar

Dilina Perera

Saad Mazhar

Agenda:

1. Review the IFD Coursework:

The meeting began with a comprehensive review of the (IFD) coursework. The team assessed the completed tasks and provided feedback on the achievements and areas for improvement.

2. Final Run Through the Prototype:

Juzail Zabrin conducted a final run-through of the system prototype, emphasizing the implemented features and functionalities. The team examined the user interface, responsiveness, and overall user experience.

3. Discussed About the Cutting Edge Meetings:

Aakash Sathiyathan presented the latest updates on the cutting-edge technology conference participation. The team discussed the benefits of attending and outlined the necessary preparations.

4. Assignment Submission:

Mohamed Alfar verified the completion of all assigned tasks and ensured that the necessary documentation and coursework were ready for submission.

Action Items:

Juzail Zabrin to address any feedback received on the IFD coursework and make necessary improvements.

Aakash Sathiyathan to coordinate with team members for the final preparations for the cutting-edge technology conference.

Chadithya Dinuwan to verify the completeness of all assignment submissions and ensure compliance with submission guidelines.

10.4. Questionnaire Summary

10.5. [Interview summaries](#)

Interview 1

Interview Summary:

Date: 15th July 2023

Interviewee: Dr. Ruzaik Ibrahim, Cardiology Specialist

Location: Potsdam, New York

During the interview with Dr. Ruzaik Ibrahim, a renowned cardiology specialist based in Potsdam, New York, we discussed the innovative healthcare system "DOCGPT." Dr. Ibrahim expressed great interest in the system and provided valuable insights from a medical professional's perspective.

Dr. Ibrahim acknowledged the significance of having a comprehensive electronic medical record system like DOCGPT, which can centralize patient data, making it easily accessible to healthcare providers across different locations. He emphasized the importance of accurate and up-to-date patient information, as it plays a pivotal role in diagnosing and managing various medical conditions effectively.

The interview further explored the Medical Chat Bot feature, which piqued Dr. Ibrahim's interest. He highlighted the potential benefits of an AI-powered virtual assistant, such as providing patients with immediate medical information and guidance on common health concerns.

Additionally, Dr. Ibrahim emphasized the importance of medication management and reminders, particularly for patients with chronic conditions. The Medication Management feature in DOCGPT can significantly improve patient compliance and enhance treatment outcomes.

Dr. Ibrahim also expressed enthusiasm for the potential integration of virtual consultations within the system. He believed that incorporating virtual consultations would revolutionize healthcare delivery, providing patients with convenient access to expert medical advice, especially in remote areas.

Moreover, Dr. Ibrahim commended the concept of gamification for health and virtual reality therapy, which could promote patient engagement and motivation in adhering to healthy lifestyle practices and rehabilitation routines.

In conclusion, the interview with Dr. Ruzaik Ibrahim provided valuable insights into the practical implications and potential benefits of the "DOCGPT" healthcare system. His professional expertise and endorsement further validate the significance of the system's features in revolutionizing healthcare delivery and patient care.

Interview conducted by: Saad Mazhar

Interview 2

Interview Summary:

Date: 19th July 2023

Interviewee: Dr. Rashan Haniffa, Health Systems Researcher

During the interview with Dr. Rashan Haniffa, an esteemed researcher in health systems, we delved into the practicality and implications of AI interference in the healthcare system "DOCGPT." Dr. Haniffa provided valuable insights into the potential impact of AI-driven technologies in revolutionizing healthcare delivery.

Dr. Haniffa commended the innovative approach of DOCGPT, particularly its integration of AI-powered solutions such as the Medical Chat Bot and Symptom Checker. He highlighted that these features could significantly improve patient access to medical information, offering immediate guidance on health concerns, and potentially reducing the burden on healthcare facilities for minor issues.

While acknowledging the potential benefits of AI interference, Dr. Haniffa also raised concerns about the accuracy and reliability of AI-driven diagnostics and health recommendations. He stressed the importance of rigorous testing and validation of AI algorithms to ensure their precision in diagnosing medical conditions and providing personalized health recommendations.

Moreover, the discussion focused on the practicality of implementing virtual consultations within the system. Dr. Haniffa emphasized that virtual consultations could enhance access to specialized medical expertise, particularly for patients in remote or underserved areas. However, he highlighted the need for robust telemedicine infrastructure and data privacy measures to ensure secure and seamless virtual healthcare interactions.

Regarding AI's role in medication management, Dr. Haniffa expressed optimism about its potential to improve patient adherence and optimize treatment outcomes. However, he emphasized the importance of a human touch in healthcare, noting that AI should complement, rather than replace, the role of healthcare providers in patient care.

In conclusion, the interview with Dr. Rashan Haniffa shed light on the significance of AI interference in the practical implementation of DOCGPT. His expert insights emphasized the need for a balanced approach, combining the power of AI-driven technologies with human expertise to achieve enhanced healthcare outcomes for patients.

Interview conducted by: Saad Mazhar
