Working with Data - DOC 327

Tutorial 1

You are going to purchase a new mobile phone at the end of the year which will cost you Rs.120,000. Your parents bank a fixed amount of money at the beginning of the month for your personal monthly expenses which you will be saving to buy your new mobile phone.

You are expected to create a Microsoft Excel Work book to manage your finances and monitor your expenses.

Save your Workbook as **My Personal Budget**

Name the first sheet as **Data** and create the following table.

Data	
Monthly Income	40,000.00
Savings Interest (per annum)	7%
Cost of Mobile	120,000.00

Today's Date	1st January 2019

Name Sheet 2 as **Calculation** and create 2 tables Actual budget and Projected budget with the following columns

Column Name	Formula
Month	1–12
CF (Carry forward)	CF = Total Savings of the previous month
Income	To be taken from the data sheet
Expenses**	To be taken from the expenses sheet
Savings	CF + Income – Expenses
Interest***	(Savings * Savings interest)/12
Actual / Projected Savings	Savings + Interest

** You are given the following projected expenses and actual expenses for 6 months while you are expected to manage and calculate your own expenses for the next 6 months to purchase the phone

Name sheet 3 as **Expenses**

Create a new sheet in your **My Personal Budget** workbook and name it **Expenses.**

In the **Expenses** sheet create the following table using given expenses and your assumed ones.

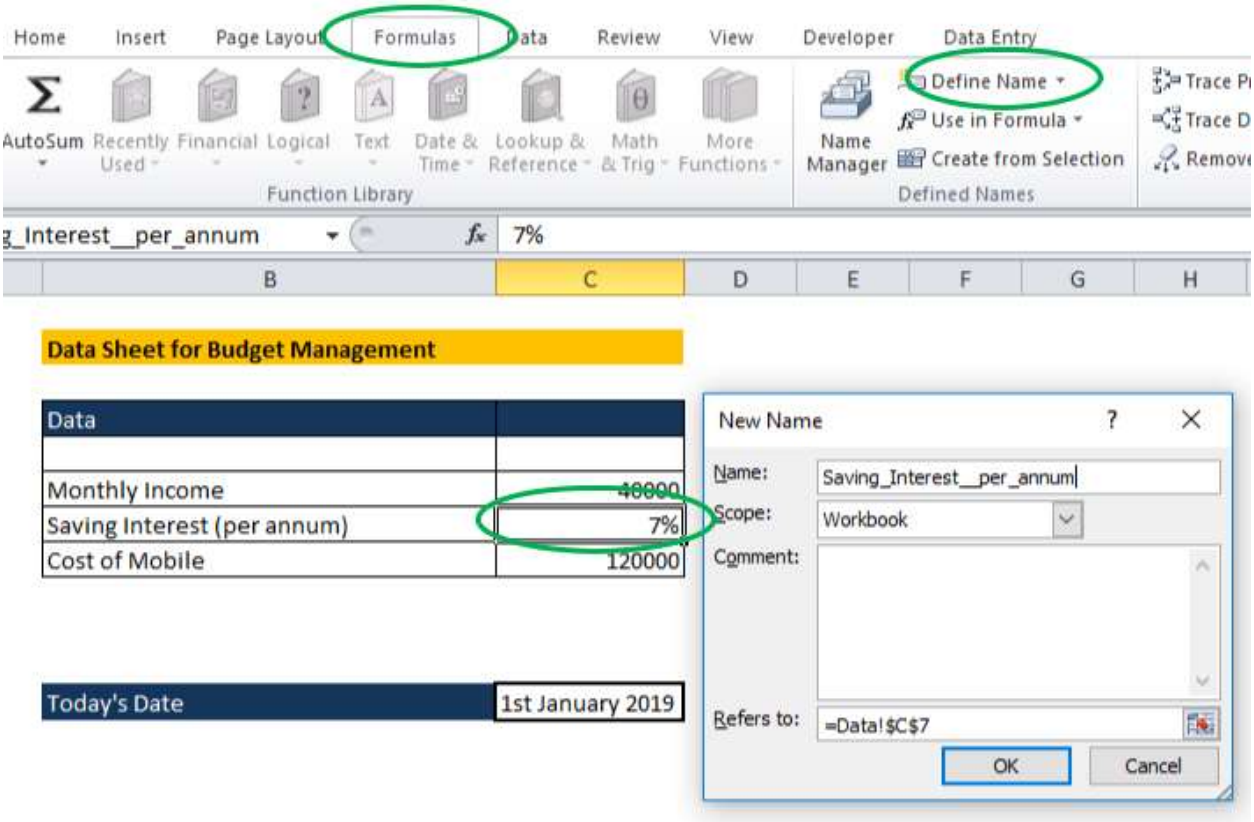

Month	Actual Expenses	Projected Expenses
1	25,000.00	30,000.00
2	35,000.00	30,000.00
3	30,000.00	30,000.00
4	35,000.00	30,000.00
5	40,000.00	30,000.00
6	38,000.00	30,000.00
7		
8		
9		
10		
11		
12		

Next link the expenses to the calculations sheet.

*** Referencing cells of another sheet to a formula.

Go the data sheet and select the cell with the **interest value**

Next on the formulas tab select Define Name and select ok

Finally use the Actual Savings column and Projected Savings column and create a line chart to monitor and plan your expenses.

By using the line chart you are able to track and manage your finance to ensure you achieve your target of saving the amount needed to purchase the mobile phone.
