DOC334 Week 03

Functions Re-Cap

Learning Outcome of This Session

- Functions
  - Re-cap
  - Try a program

What is a Function?

- A sperate code block
- Starts with **def** keyword
- 4 ways to write them
  1. Simple functions
  2. Functions accept parameters
  3. Functions return values
  4. Functions accept parameters and return values

Write a Python Code for Below Question

- Write a Python program to calculate the default 10% tip for a restaurant bill. Diners must be able to type the bill values and see the details of tip amount and final bill value (tip added)
  - Use Sequential control structure
    - No Functions!
  - Take 10 minutes

After Coding

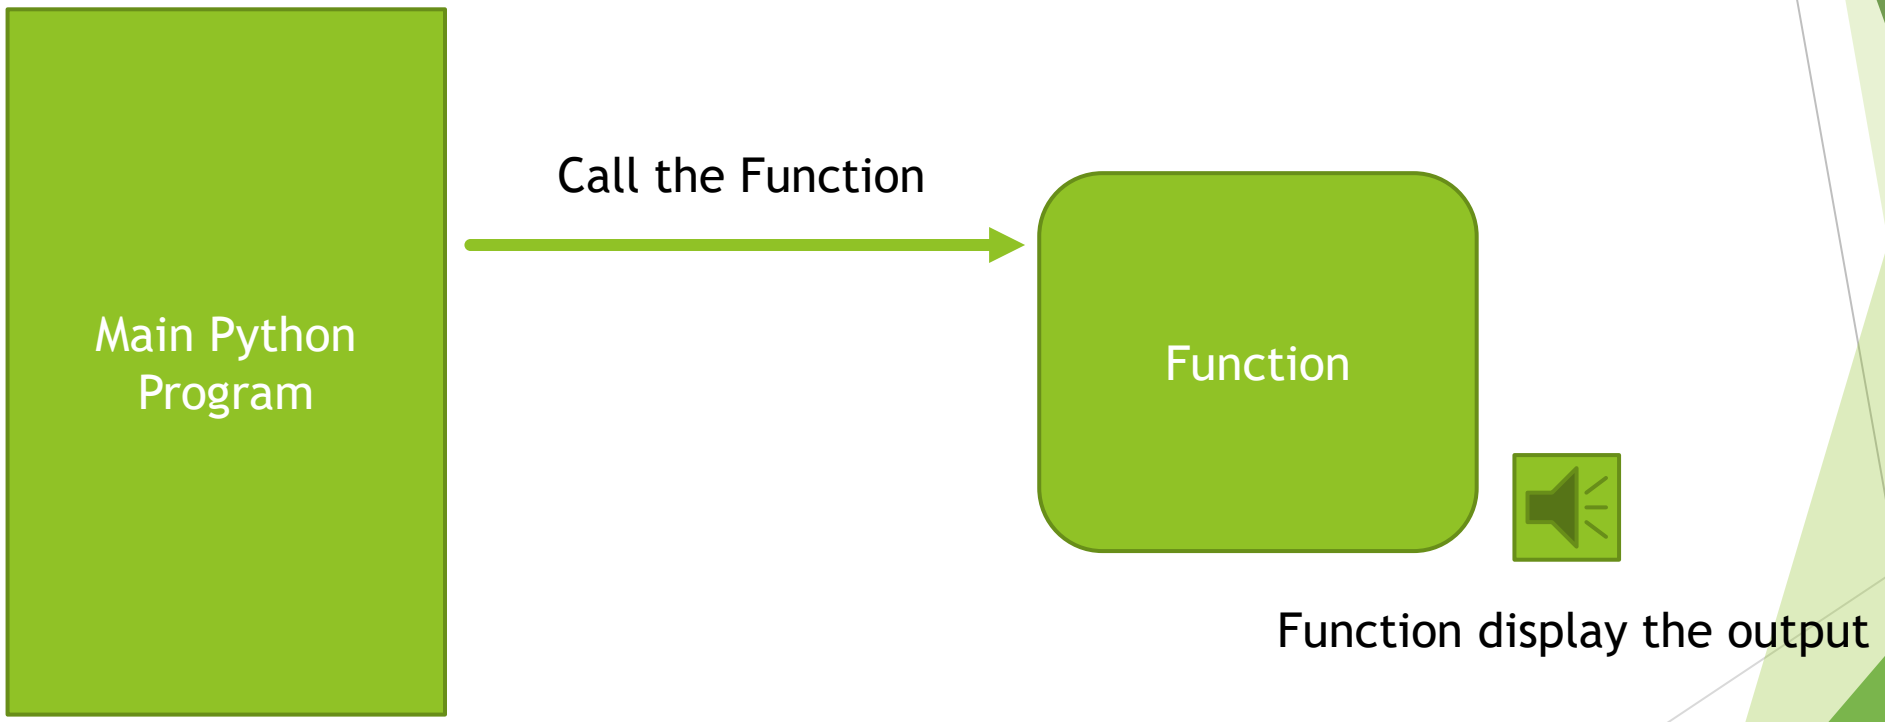

- Is your program working?
  - Console and IDLE
- Is the tip correct?
- Is the final bill correct?
- Let's mark with a dummy scheme

```
Type your final value : 100
Waiter tip is : 10.0
Final paymnet is : 110.0
>>>
```

Marking Scheme

- Marking for Question - slide_4

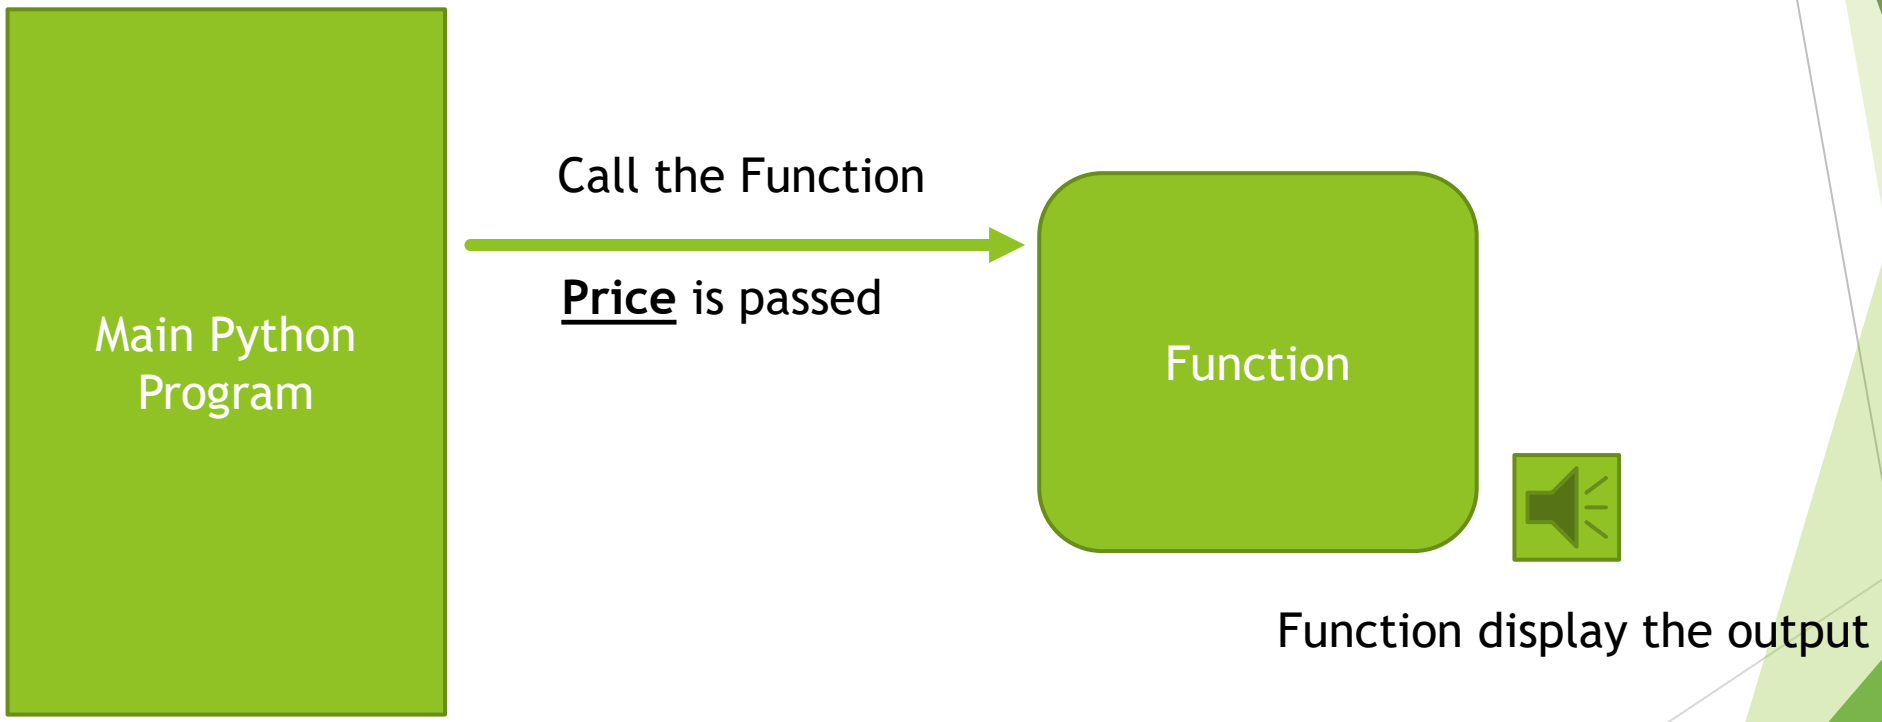

Re-Write the Previous Program as a **Simple Function Call** program (10 Minutes)

Marking Scheme

- Marking for Question - slide_7

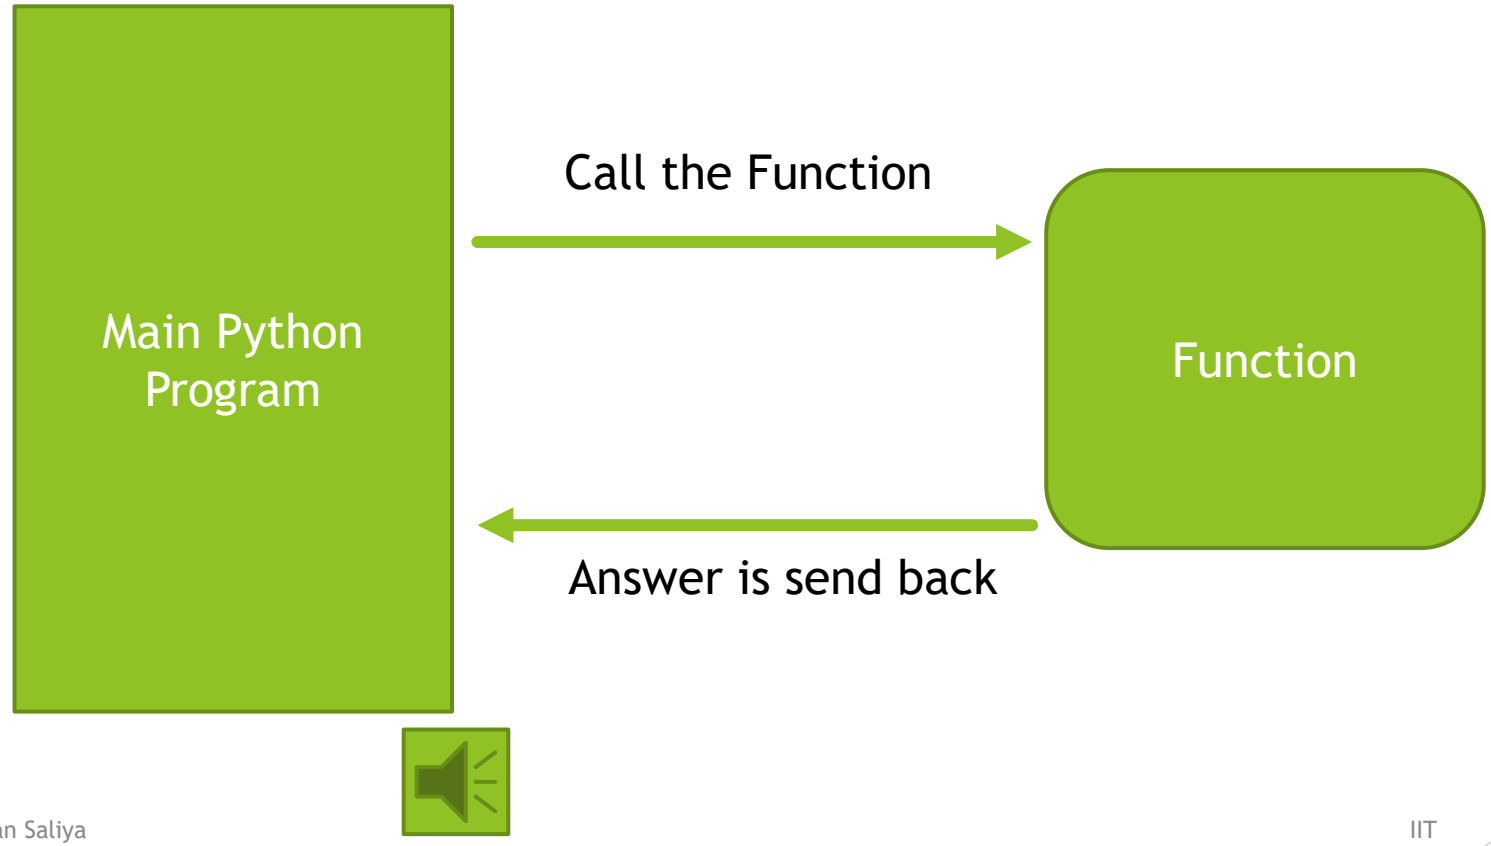

Re-Write the Previous Program as a **Function Accepting Parameters** program (10 Minutes)

Marking Scheme

- Marking for Question - slide_9

Re-Write the Previous Program as a **Function Returns Value** program (10 Minutes)

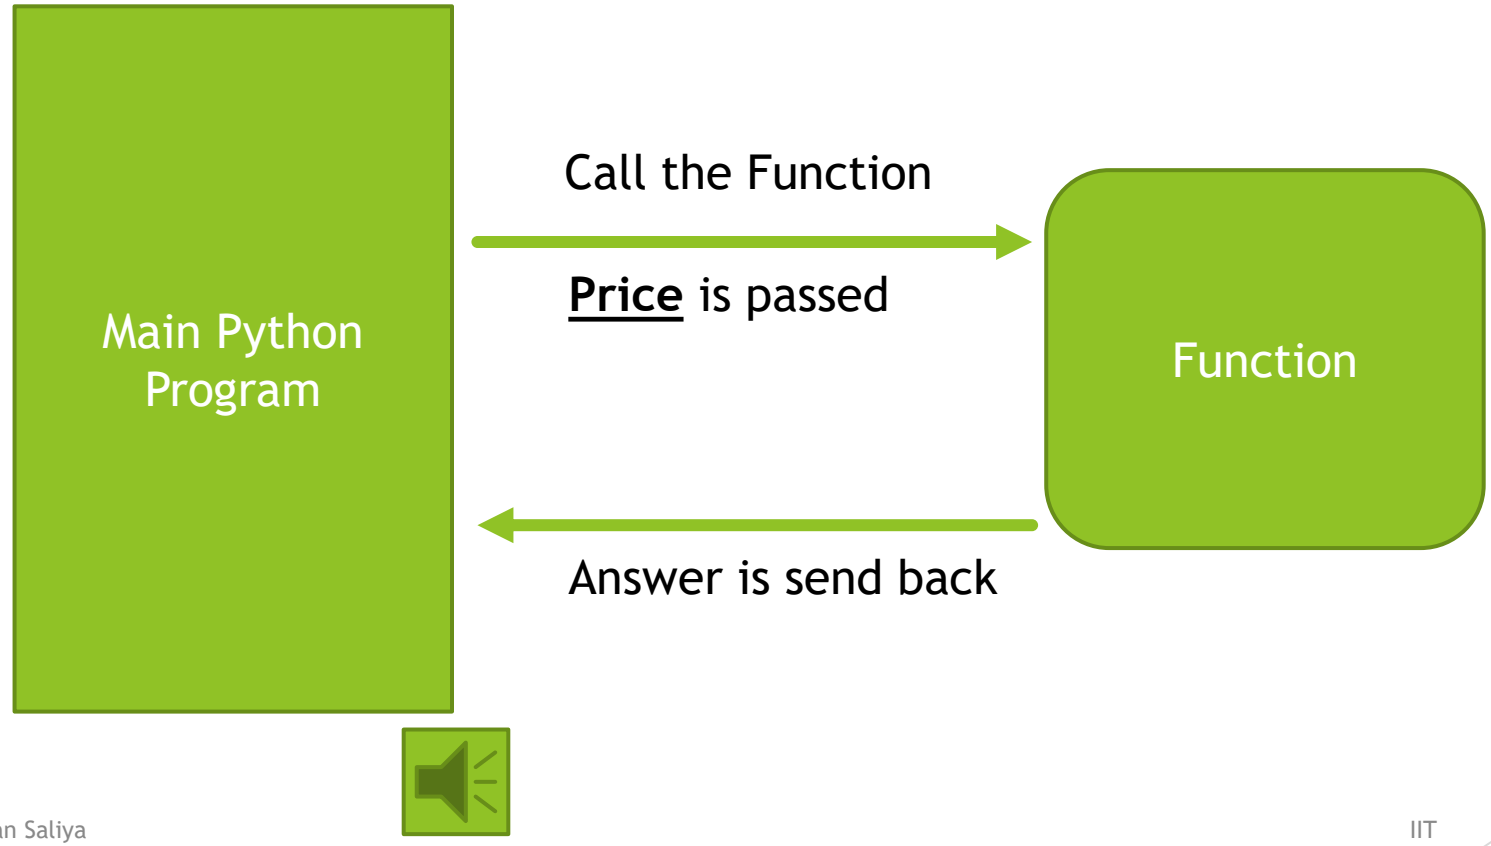

Main program display the output

Marking Scheme

Marking for Question - slide_11

Re-Write the Previous Program as a **Function Accept Arguments and Returns Values** program (10 Minutes)

Main program display the output

Marking Scheme

- Marking for Question - slide_13

Alternative Code
