

DRAGON GAME

Aim of This Project

- Demonstrate the use of
  - Variables
  - Selections
  - Loops
  - User defined functions
    - Arguments
    - Parameters
    - Return values
    - Local variables
  - Modules & Packages
  - Random numbers
  - Use of Time library (New)

Basic Story Line

The player is in the Kingdom of Dragons. The dragons live in caves with their large piles of collected treasure. Some dragons are friendly and share their treasure. Other dragons are hungry and eat anyone who enters their cave. The player approaches two caves, one with a friendly dragon and the other with a hungry dragon but doesn't know which dragon is in which cave. The user must choose between the two caves.

Your Tasks

- As the coder, you must create a program to satisfy the basic needs of the game.
- Pay close attention to the game demos
- Make use of extra demo codes/hints to understand additional skills
- Once the basic is working, you can touch the extended game features and implement them.

Basic Game Play

- Once the game starts, it'll display the below intro
  - *You are in the Kingdom of Dragons. In front of you, you see two caves. In one cave, the dragon is friendly and will share his treasure with you. The other dragon is hungry and will eat you on sight*!
- Then the player is given a chance to select a cave (1 or 2)
- Once a cave is selected, the program will decide is there a friendly dragon or hungry dragon inside it.
- If the dragon is friendly, you win the game and if the dragon is hungry, you loos the game and your life!

Basic Game Play (Demo 1)

- What you are about to see is the **basic game play demo**
- Pay attention and understand the game requirements
- Python codes will not be shown as you need to develop them by your self

Some Output Screens for Game Play 2

You are dead

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1 or 2 : 1

You approach the cave...
A large dragon jumps out in front of you!
He opens his jaws and...

Gobbles you down!
```

You won a treasure

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1 or 2 : 1

You approach the cave...
A large dragon jumps out in front of you!
He opens his jaws and...

Greets you before share his treasure!
```

Try The Below Code and Observe

```
1 import time
2
3 print("This is line 1")
4 print("This is line 2")
5 time.sleep(2)
6 print("This is line 3")
7
```

Game Demo 2

- What you are about to see is the **challenge 1 of game play demo**
- Pay attention and understand the game requirements

Challenge Game Play 1 (Demo 2)

- All features of basic game play (Demo 1) must be working. The new additions would be,
  - Instead of 2 caves, there are 5 caves now
  - The narration must have a small suspension (How would you do that🤔)
    - Pay attention to demo 2

Some Output Screens for Game Play 2

You are dead

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : 3

You approach the cave...
A large dragon jumps out in front of you!
He opens his jaws and...

Gobbles you down!
```

You won a treasure

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : 3

You approach the cave...
A large dragon jumps out in front of you!
He opens his jaws and...

Greets you and then gives you his treasure!
```

Game Demo 3

- What you are about to see is the **challenge 3 game play demo**
- Pay attention and understand the game requirements

Challenge Game Play 2 (Demo 3)

- All features of challenge game play 1 & 2 must be working. The new additions would be,
  - Program should keep asking for the correct cave number upon invalid user inputs
  - User must be able to replay the game again if he/she wishes
  - The last game play must be saved in a text file

Some Output Screens for Game Play 3

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : 1

You approach the cave ... 1
A large dragon jumps out in front of you!
He opens his jaws and...
Gobbles you down!

Do you want to play again? (y/n)n
>>>
```

Some Output Screens for Game Play 3

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : 1

You approach the cave ... 1
A large dragon jumps out in front of you!
He opens his jaws and...
Greets you and then gives you his treasure!

Do you want to play again? (y/n)y

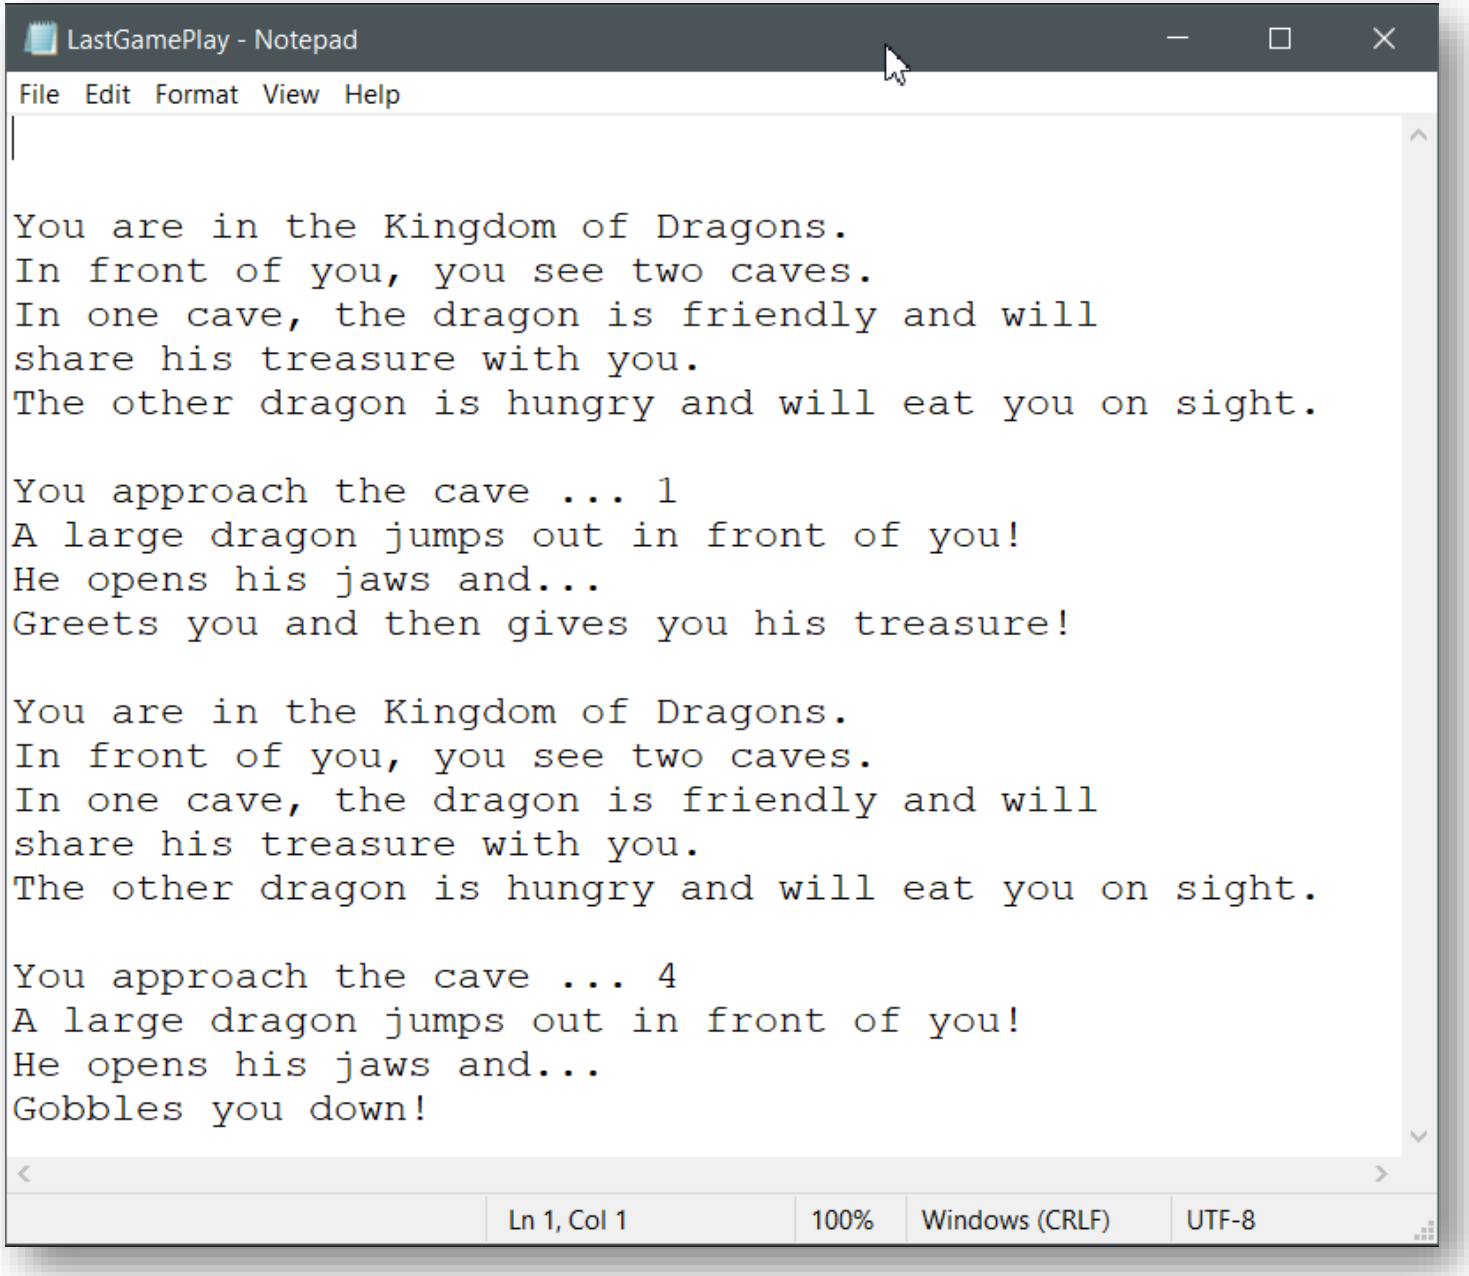

You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : 4

You approach the cave ... 4
A large dragon jumps out in front of you!
He opens his jaws and...
Gobbles you down!

Do you want to play again? (y/n)n
>>>
```

Some Output Screens for Game Play 3 (Text File)

Some Output Screens for Game Play 3 (Cave Validation)

```
You are in the Kingdom of Dragons.
In front of you, you see two caves.
In one cave, the dragon is friendly and will
share his treasure with you.
The other dragon is hungry and will eat you on sight.

Cave 1,2,3,4 or 5 : B
Cave 1,2,3,4 or 5 : 8
Cave 1,2,3,4 or 5 : k
Cave 1,2,3,4 or 5 : 3

You approach the cave ... 3
A large dragon jumps out in front of you!
He opens his jaws and...
Gobbles you down!

Do you want to play again? (y/n)N
>>>
```
