

Working with Strings

SPECIAL NOTE

- ▶ This presentation consists of some theory slides too!
 - ▶ This is for learning purposes
- ▶ Additional reading
 - ▶ https://www.tutorialspoint.com/python/python_strings.htm

What Can We Do?

- ▶ Assign strings
- ▶ Display strings
- ▶ Concatenate strings
- ▶ Display specific character
- ▶ Display a set of characters
- ▶ Update strings (one character or set of characters)
- ▶ Other operations

Concatenate

```
# Declare variables
Company = "Informatics"
Short = 'IIT'

# Display values
print (Company)
print (Short)

# Concatenate (join)
FullName = Company + Short
print (FullName)

FullName = Company + " " + Short
print (FullName)
```

Display Specific Values

```
# Declare variables
Name1 = "Nishan"
Name2 = 'Saliya'

# Display values
print (Name1)
print (Name2)

# Specific values
print (Name1[4])
print (Name1[1:4])
```

N	I	S	H	A	N
0	1	2	3	4	5

N	I	S	H	A	N
0	1	2	3	4	5

Other String Operations

```
# Declare variables
Name = "IIT"

# Display values
print (Name)

# Other operations
print (Name * 2) # Repeat strings
print ("I" in Name) # Is "I" inside Name
print ("H" not in Name) # Is "H" not in Name

print (len(Name)) # Length of Name
print (Name.capitalize())
print (Name.upper())
print (Name.lower())
print (Name.center(7, "*"))
print (Name.index("T", 0, 3)) # Location of "T"
print (Name.isnumeric())
print ("55".isnumeric())
```
